MEASURE 2.2

BEACHMED.e

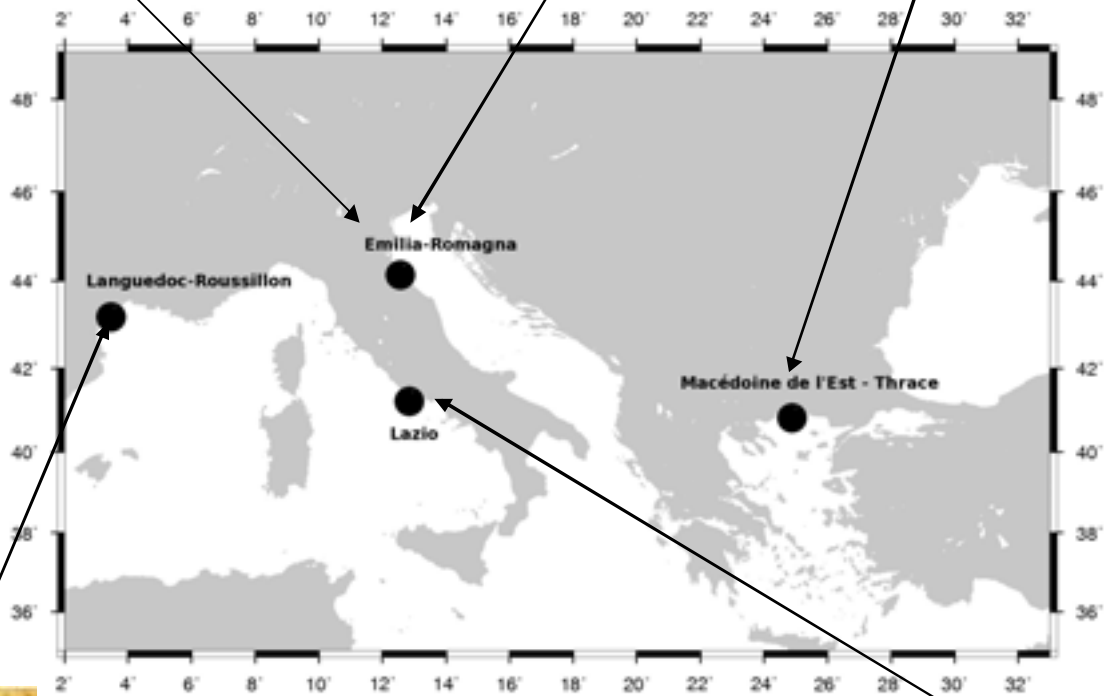

ARPA-SIM  
UNIBO-DISTART

FRI-NAGREF

GEOSCIENCES-M

UNIVERSITY LA SAPIENZA

# STAFFS

## **PARTNER 1: GEOSCIENCES -MONTPELLIER**

- 8 permanent researchers
- 2 post-docts
- 3 PhD students
- 1 technicians
- 3 scuba divers

## **PARTNER 2: UNIBO DISTART**

- 5 permanent researchers
- 3 PhD students

## **PARTNER 3: FRI-NAGREF**

- 2 permanent researchers
- 2 experts
- 2 other permanent people

## **PARTNER 4: ARPA-SIM**

- 4 permanent researchers

## **PARTNER 5: UNIROMA LA SAPIENZA**

- 5 permanent researchers
- 2 experts
- 3 other permanent people
- 3 scuba divers

**TOTAL: 48 people**

# CALENDAR / INFORMATIONS

Official meetings of the component 2

4 specific meetings for NAUSICAA:

February	2007	DISTART / ARPA-SIM	final meeting phase B for component 2
June/july	2007	FRI-NAGREF	specific meeting: on going collaborations
December	2007	GEOSCIENCES-M	intermediate meeting phase C comp 3
February	2008	LA SAPIENZA	intermediate meeting phase C comp 2

To be confirmed (not included in BEACHMED-E project):

A post-doc from january 2007 to april 2008 dedicated to NAUSICAA  
fellowship management

**Detailed** documents for phase A, B and C.

# NAUSICAA

**Determination of coastal to nearshore marine climates**

**Analysis of coastal hazards,  
of defence structure behaviour and  
of *Posidonia oceanica* field dynamics.**

## **MAIN ACTIVITIES :**

In-situ measurements of coastal / nearshore hydrodynamics

Conception and/or deployment of new equipments for hydrodynamics

Tools and concepts for a better understanding of coastal/nearshore morphodynamics: - CSI Coastal State Indicators

- (new) numerical models
- documents: hydrodynamics, sedimentary or biological processes → Coastal management

Online database

## OUT AT SEA...

FRI-NAGREF Vessel

UNIROMA Vessel with towed underwater video cameras

Tethys vessel, used by GEOSCIENCES-M

GEOSCIENCES-M vessel

**UNDER...**

*Posidonia oceanica* meadows regression

**AND HYDRODYNAMICS**

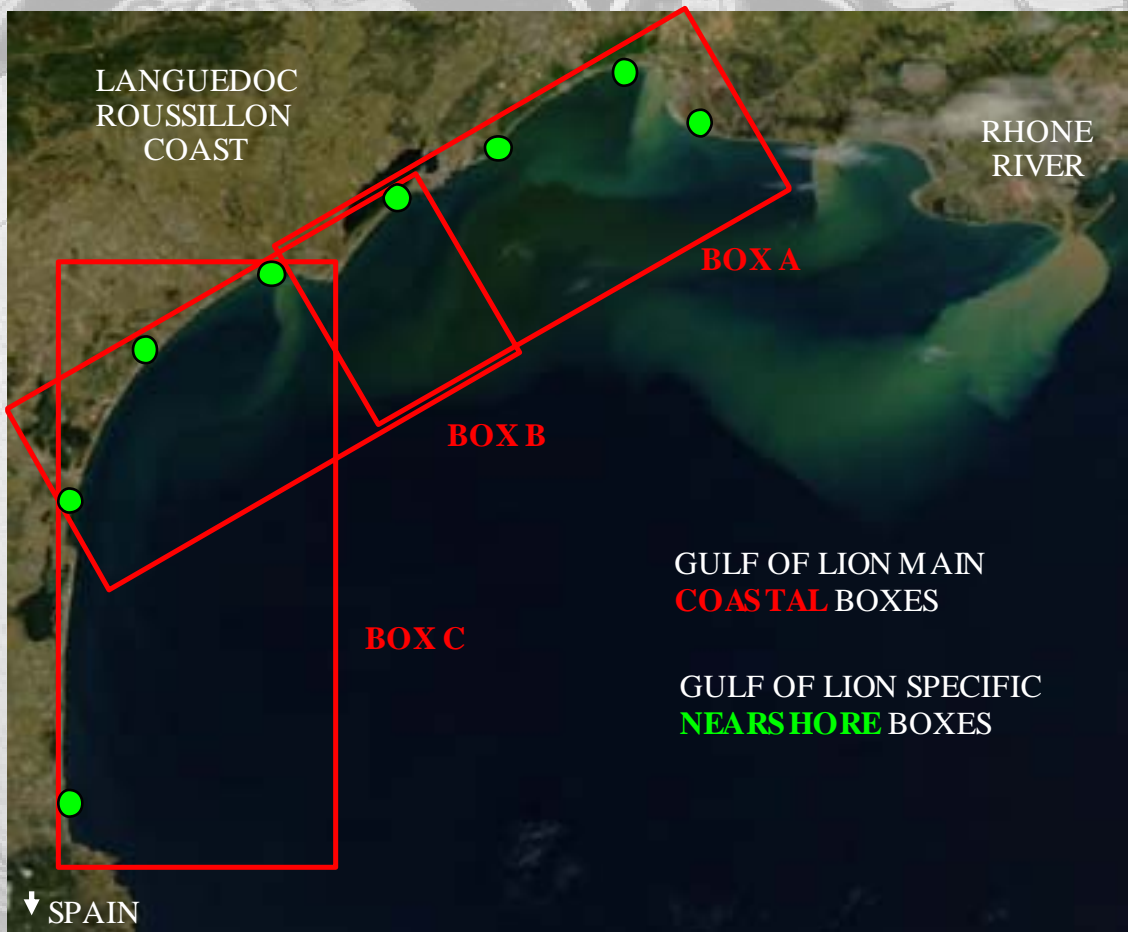

Two coupled ADV used in surf zone

# STUDIED AREAS AND PLANNED DEPLOYMENTS

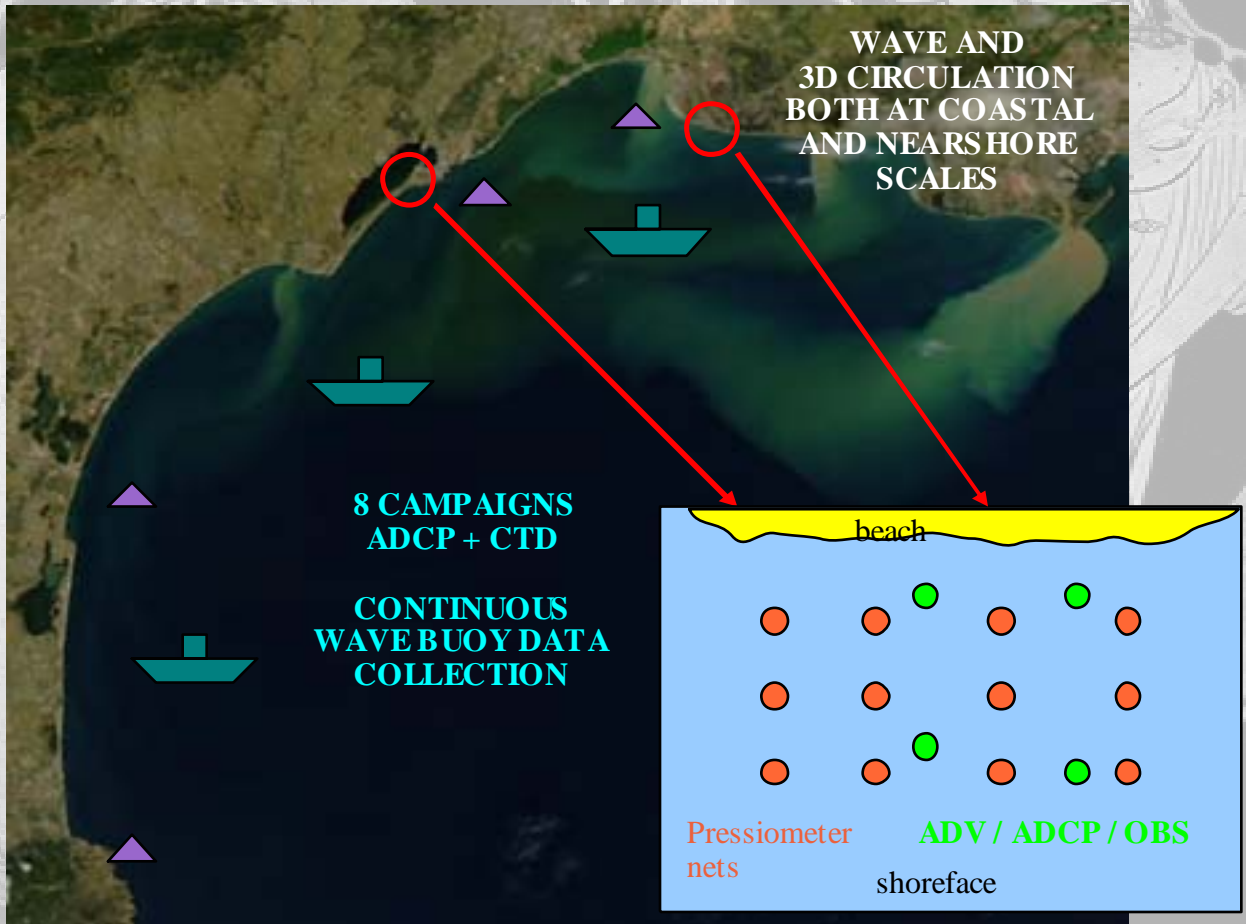

## PARTNER 1: GEOSCIENCES -M

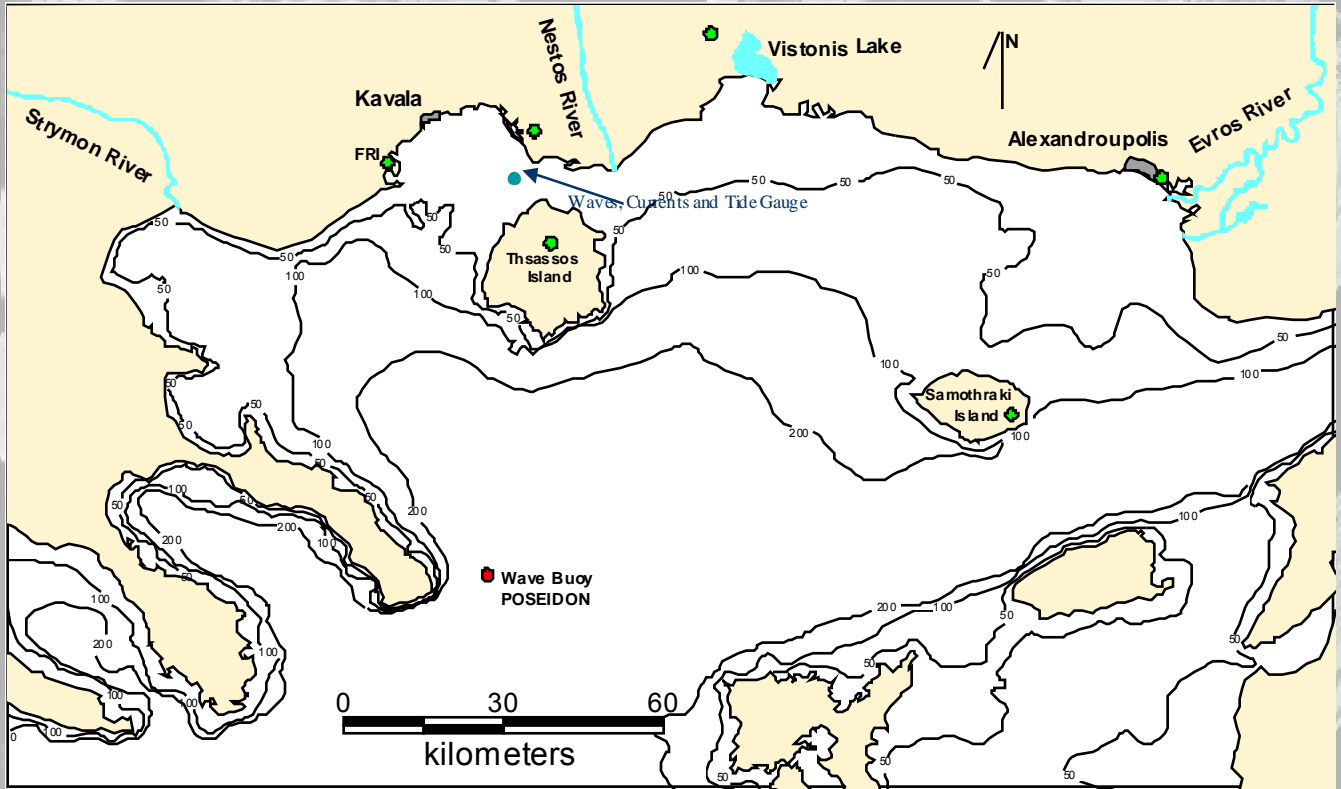

# STUDIED ZONES AND PLANNED DEPLOYMENTS

## PARTNER 1: GEOSCIENCES -M

# STUDIED AREAS AND PLANNED DEPLOYMENTS

## PARTNER 3: FRI-NAGREF

**STUDIED ZONES**

**PARTNER 5: UNIVERSITY UNIROMA LA SAPIENZA**

**MEASUREMENTS :**

**REMOTE SENSING**

**WAVE BUOYS**

**Area of Study:** from Circeo Cape to Terracina and Ponza island

# STUDIED AREAS AND MEASUREMENTS

## PARTNER 4: ARPA-SIM

## STUDIED ZONES AND DEPLOYMENTS

### PARTNER 4: ARPA-SIM

#### **INSTALL AND MANAGE A NEW OCEANOGRAPHIC STATION FOR THE MONITORING OF WAVES AND OCEANOGRAPHIC PARAMETERS**

- will be part of the Emilia Romagna meteo-hydrological network
- will provide data for the verification of the wave and oceanographic numerical models, running by ARPA-SIM
- will provide input data for the future versions of the operational wave and oceanographic models.
- will provide data to compile the wave climatology for the Emilia Romagna coastal zone.
- will provide input data to the coastal model, developed by partner DISTART UniBO, to calculate the impact of waves on the coastal area of the Emilia Romagna region.
- The data will be stored in the SIM data base and made available to the users by the internet interface (Dexter).

**STUDIED ZONES AND PLANNED DEPLOYMENTS**  
**PARTNER 2: UNIBO-DISTART**

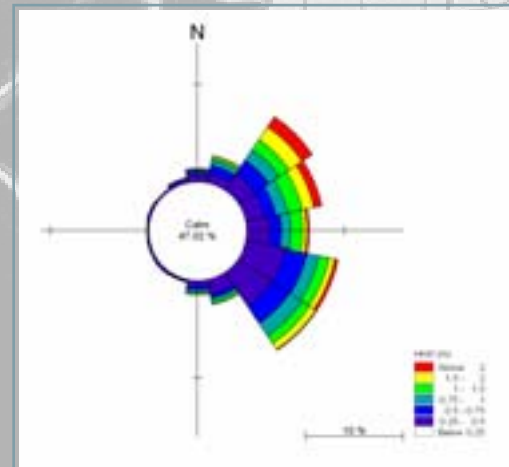

**+ ADCP CAMPAIGNS**

**SAME ACTIVITIES ON A SECOND AREA:  
IGEA MARINA**

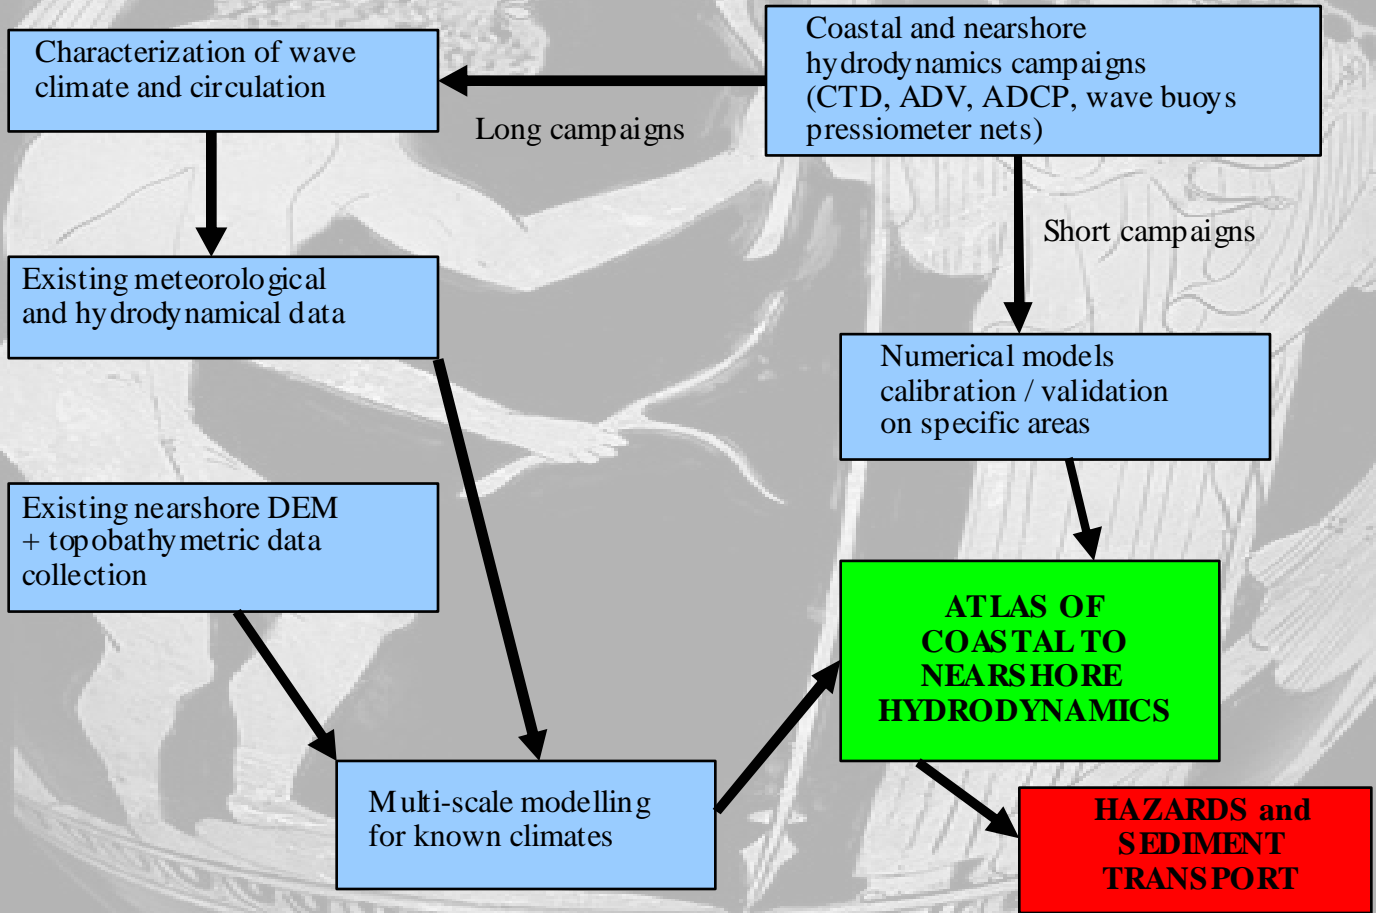

# STUDIED ZONES AND PLANNED DEPLOYMENTS

## PARTNER 2: UNIBO-DISTART

### COLLECTION AND ELABORATION OF METEOMARINE DATA (WAVE DATA PROVIDED BY ARPA-SIM)

# PARTNERS 1 and 3: GEOS CIENCES -MONTPELLIER AND FRI-NAGREF

COASTAL PROCESSES

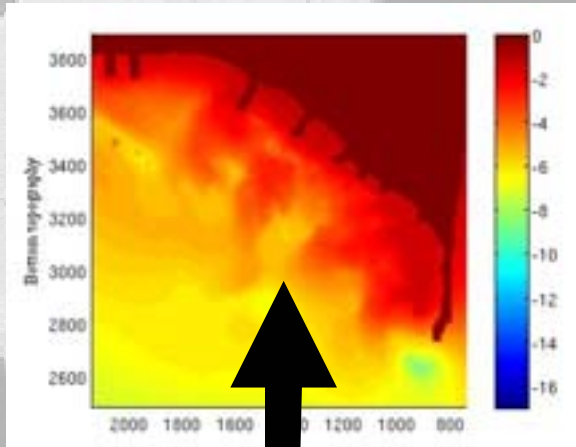

5 km  
[Black scale bar]

3D circulation forced by strong North-West Wind

Mean wave-induced current and sea-surface elevation for waves from South-East

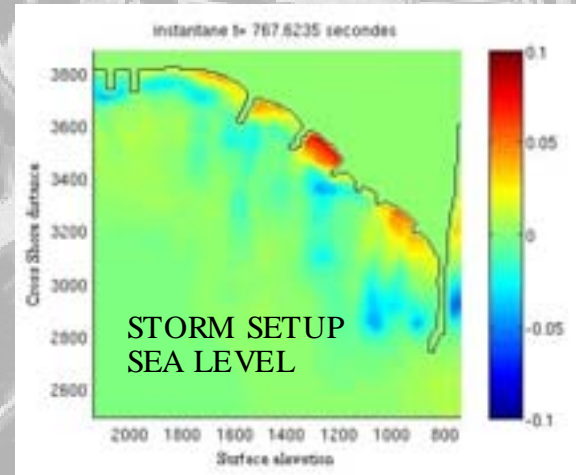

**NEARSHORE PROCESSES**

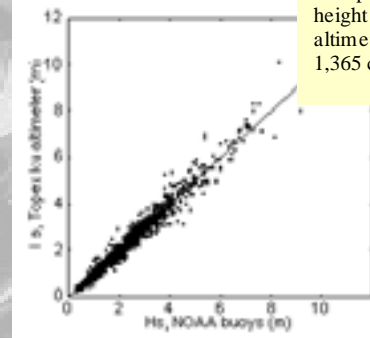

**REAL WATER DEPTH  
AND REALISTIC CLIMATES**

200 m

*Aim: to collect reliable information on wave parameters in the area of interest.*

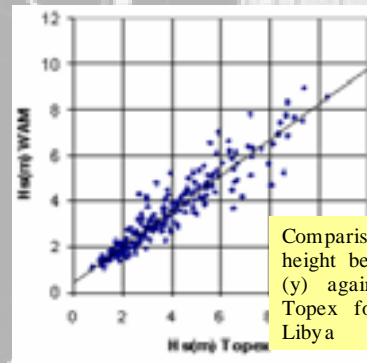

Comparison of significant wave height between the Topex altimeter and NOAA buoys for 1,365 coincident data

**1 – VALIDATION OF REMOTELY SENSED MEASUREMENTS**  
comparison between buoy and satellite data

**2 – MODEL DATA CALIBRATION**  
comparison between model and satellite data

Comparison of significant wave height between WAM model data (y) against altimeter data from Topex for the Mediterranean off Libya

**COASTAL CLIMATE CHARACTERIZATION**

**3 – EXCTRACTION OF TIME SERIES (Hs, T,  $\theta$ )**

**4 – STATISTICAL ANALYSIS:**  
one- and two-dimensional distributions to thoroughly describe the wave climate

**RESULTS BENEFICIAL TO:**  
• CIRCULATION  
• SEDIMENT TRANSPORT

**5 – TRANSFER OF THE WAVE CLIMATE TO THE COAST by the 3<sup>rd</sup> generation wave model SWAN**

**6 – Computation of stresses for bed mobilization factor and as input for the hydrodynamical model**

**LOCAL CIRCULATION CHARACTERIZATION**

**7 – Computation of local circulation by the 3D ROMS model**

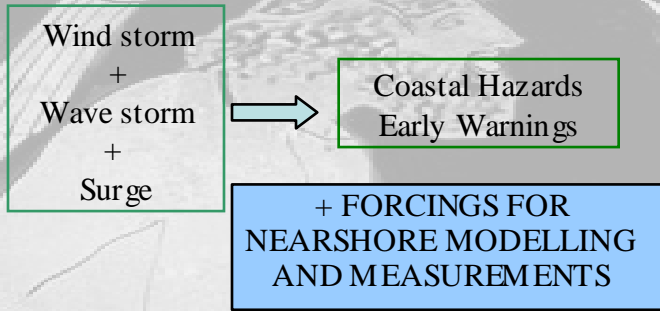

**8 – Estimation of the influence of Posidonia on the wave climate in shallow water**

**9 – Analysis of the correlations between modelled local currents/waves and Posidonia regression/accretion**

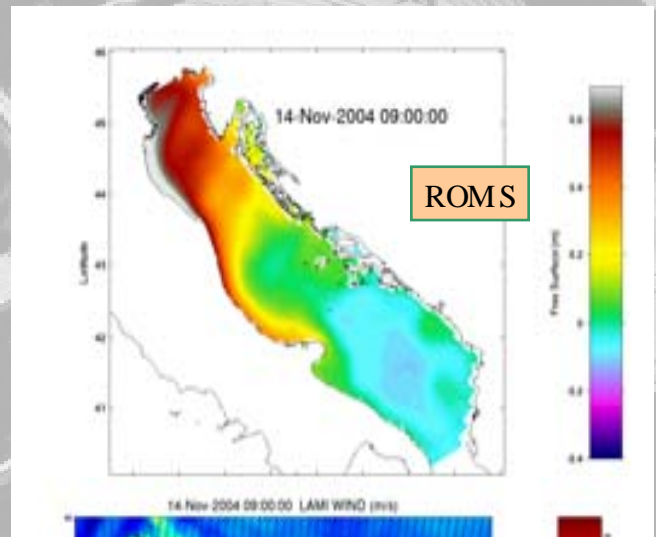

**RESULTS BENEFICIAL TO:**  
**.SEDIMENT TRANSPORT**  
**.COASTAL PROTECTION**  
**.COASTAL ZONE MANAGEMENT**

## PARTNER 4: ARPA-SIM

Meteo-oceanographic models (SIM):

- LAMI (Limited Area Model Italy)
- WAM-SWAN (wave models driven by LAMI)
- AdriaROMS (sea level and currents model)

## PARTNER 2: UNIBO-DISTART

### IDENTIFICATION AND COLLECTION OF CS Is: SHORELINE POSITION AND INTERTIDAL BEACH MAP

At each hour/day:

- we identify the shoreline position
- we associate to it the simultaneous sea level level
- we obtain an intertidal beach map

**NUMERICAL SIMULATIONS WITH MIKE 21**

**NSW** (Nearshore Wind Spectral Waves)

Wave propagation from off-shore to near-shore areas

**PMS** (Parabolic Mild Slope)

- Wave propagation in presence of structures

**HD** (Hydrodynamic)

- Hydrodynamic circulation induced by waves

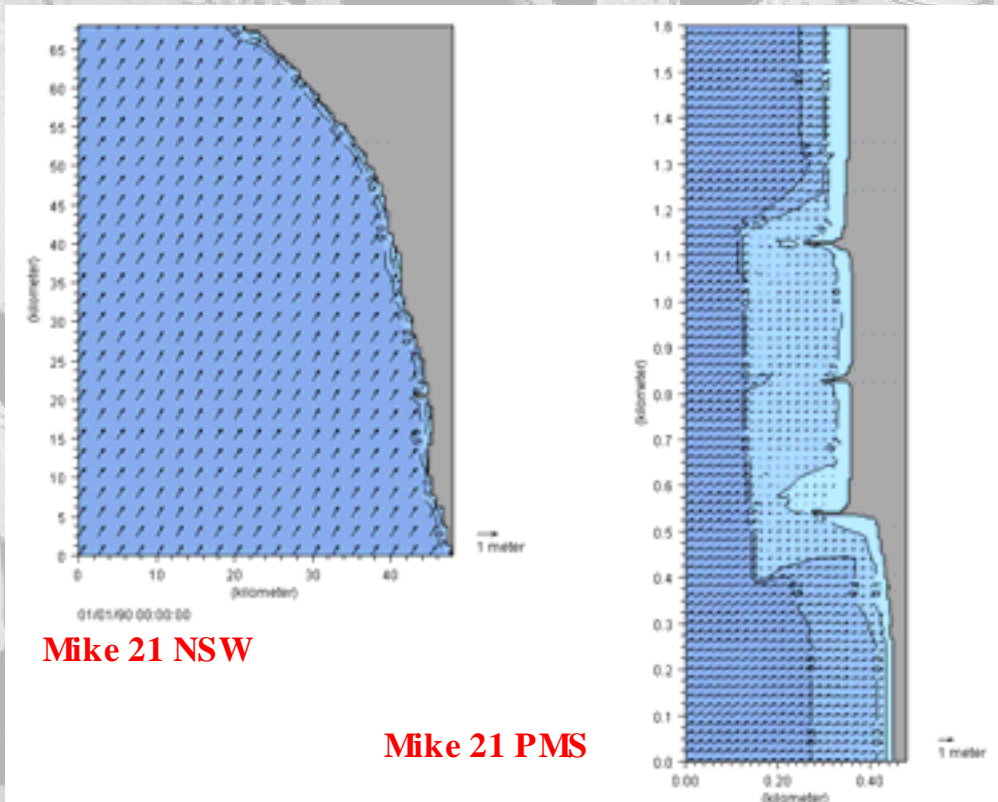

**ST-Q3** (Sediment Transport)

- Sediment fluxes
- Deposition/erosion trends

## PARTNER 2: UNIBO-DISTART

### WAVES TRANSFORMATION FROM OFFSHORE TO NEARSHORE

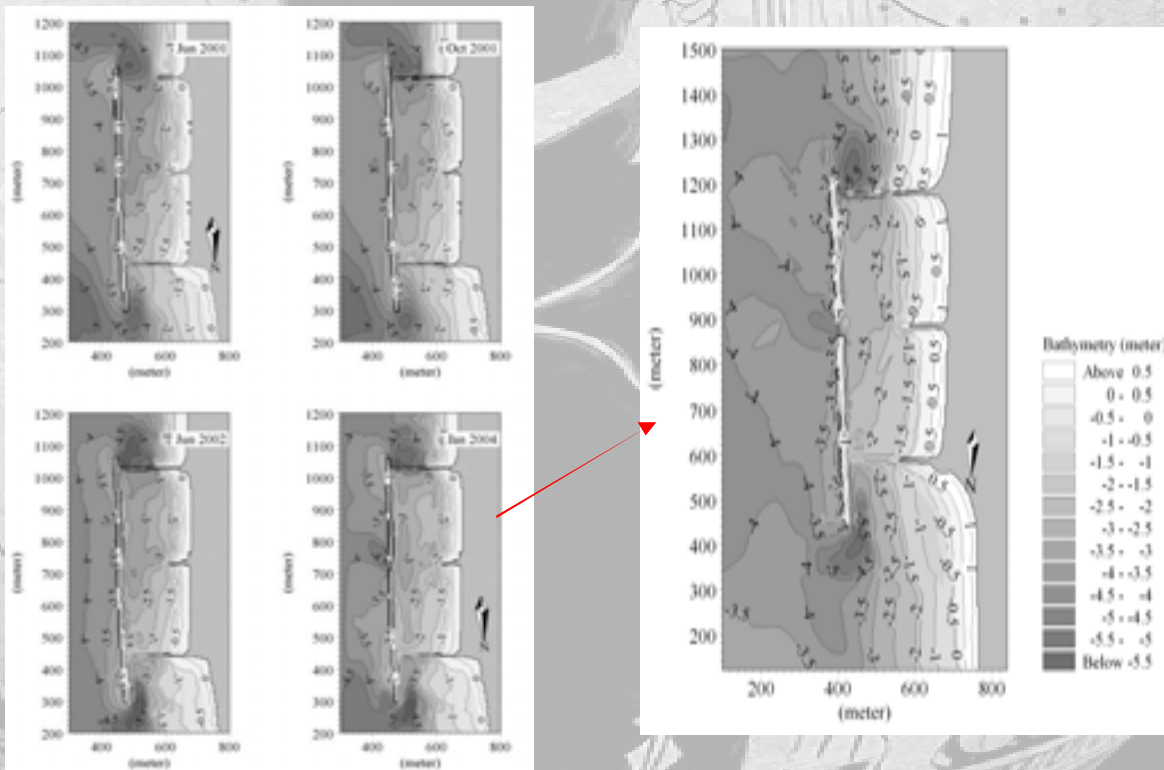

**Mike 21 NSW**

**Mike 21 PMS**

## PARTNER 2: UNIBO-DISTART

### FIELD SURVEYS AND SIMULATED BED CHANGES

## SUMMARY

Same methodologies

Same kind of numerical tools

Three common objectives:

- 1) in situ measurements of hydrodynamics
- 2) numerical modelling of hydrodynamics at various scales
- 3) storage in database and maps/atlas conception
